## **RICHARD DEL CONNOR**

### **CONNOR BLACK HOLE BUBBLE THEORY**

Richard Del Connor began revealing his "**Connor Black Hole Bubble Theory**," in 2010 to Professor Hawking and some of his rivals.

Perhaps they needed more time to work on their equations...

Perhaps they were afraid to acknowledge something that would put them in controversy, or disprove their current equations.

- 1. Our universe is just a bubble inside a larger universe.**
- 2. Outside our universe, is a tar pit of very dense "black matter."**
- 3. Black holes are the black tar outside of our bubble.**

Those are the most important points to grasp first.

If you can visualize the above, you are one of the few people in the world, or at least of THE FIRST people in the world to realize this.

"Welcome aboard."

### **Author: Richard Del Connor**

Chinese name: Zhen, Shen-Lang "Buddha Zhen"

English translation: Spirit Wolf of Truth

Musician name: The Hippy Coyote of American Zen

Richard Del Connor decided to pursue a life of music, poetry, performing, and love. His alternatives included a scientific life, preferring biology and physics. As a psychedelic artist from the flower power years, Richard was a disciple of the Maharishi Mahesh Yogi, of The Beatles fame. In the 1980s, Richard dabbled in physics, and quantum... and ended up being a Shaolin Kung Fu master, Tai Chi teacher, and Zen Priest of his own Buddhist sect, Shaolin Zen. As a Mr. mom, Kung Fu instructor, and observer of society, Richard has blended together the best of the ancient philosophers with the best of today's quantum astronomers to discover new ways and methods for viewing reality and understanding the consequences of our actions.

### **About the Author:**

**Richard Del Connor** teaches Shaolin Kung Fu and Yang Style Tai Chi under the name, **Buddha Zhen**. He is also "**The Hippy Coyote**" of American Zen. These three identities all have different dreams and stories related to this, "**Connor Black Hole Bubble Theory.**"

In 1992 Richard founded the Shaolin Chi Mantis Traditional Buddhist Gongfu schools.

***[www.ShaolinChiMantis.com](http://www.ShaolinChiMantis.com)***

In 1996 Master Zhen founded the Tai Chi Youth nonprofit education organization.

***[www.TaiChiYouth.org](http://www.TaiChiYouth.org)***

In 1998 Zhen Shen-Lang founded the Shaolin Zen sect of Chan Buddhism.

***[www.ShaolinZen.org](http://www.ShaolinZen.org)***

In 2008 Buddha Zhen founded the Buddha Kung Fu schools.

***[www.BuddhaKungFu.com](http://www.BuddhaKungFu.com)***

In 2010 Coyote shaved his head--for the third time--to become the Hippy Buddha?

**Connor Black Hole Bubble Theory**  
*by Richard Del Connor*

**Introduction**  
Preface

I'm sorry.

Really sorry.

Well, it's actually not in my power... so I have nothing to be "sorry" for.

But I am sorry to "bring you the bad news."

Of course, we kind of accept that someday "the sun will burn out..."

But, well -- really, I have no concepts of "when" anything will happen. I'm merely explaining the "way things are."

Here's an extreme thought: We're like a fart bubble rising from the swimsuit waistband and rising for the surface. We strike the body, bounce off... this tears a small hole in our bubble universe. The black tar wants to pour in but the expanding gas ether of our universe is still expanding. Like any fart bubble it expands as it attains altitude due to the decreased pressure from less fluid atop it. We rise to the top and explode into the atmosphere of our surrounding universe... Then what?

## **Chapters**

- 01. Black Holes**
- 02. The Bubble**
- 03. Outside Bubble**
- 04. Expanding**
- 05. Rising**
- 06. Big Bang**
- 07. Cosmic Burp**
- 08. Spiritual Story**

## **Connor Black Hole Bubble Theory**

*by Richard Del Connor*

### **Apology?**

Where I am in space, is here.  
What I do is partly up to you.  
What I have is from all of them  
Who take part is some of what I do.

My reward is from your love.  
My home is for my time.  
If what I have is not enough--  
Is apologizing a crime?

## Chapter 01 - Black Holes

We are inside a big bubble.

Outside of our bubble is a black dense substance.

When something pokes a hole in our bubble, the black stuff outside wants to pour inside.

Its' density is something like a handful having the mass of a planet. (I really don't have a statistic.)

When enough planets get sucked into the black hole does it coagulate back into a bandaged bubble.

We don't want to go out there.

***note:** Today in September 2011, I was unable to find my notebooks in storage -- original book notebooks.*

*So, I'm gonna give you a Zen, off the cuff overview of my 30 years of study.*

*Hey! Hold it! ... I found this:*

Dear Stephen Hawking:

My theory might prove that you and Leonard Suskind are each correct.

The black hole is a hole in the bubble we are suspended within. A hole in our bubble is a black hole where our universe is sucked out until it plugs up the hole -- the black hole disappears. The matter that went through the black hole disappears OUTSIDE our bubble -- where we can't see. The reflection we see at the end of our universe is a reflection from the inside of this bubble we reside in.

Matter does not disappear within our reality, only lost to our view when sucked out of our black hole bubble.

I have many other visions and theories related to my Black Hole Bubble theory, that may also be useful to you.

Sincerely,  
Richard Del Connor  
producer@shaolinRECORDS.com  
818-723-2769

And I found this:

Connor Black Hole Bubble Theory: February 2011

I have contacted Professor Hawking and conveyed some information to his assistant, via emails. I am not certain the information has been transferred to him.

I wanted to share these theories with you also, to validate the theories of both Prof. Susskind, and Prof. Hawking, by explaining they are both correct, just incomplete.

The foremost of my theories: "**Connor Black Hole Bubble Theory**," will explain why matter disappears, but still exists. This will validate both of their theories.

I've been saving these theories for decades, but decided to openly share them, to help Prof. Hawking complete his Black Hole theories.

My "**Black Hole Bubble Theory**" also explains why Black Holes appear and disappear.

SIMPLY PUT: Our reality is a bubble within another larger cosmos of black fluid, like a bubble in tar. We are within this bubble. The skin of our bubble gets holes in it, and matter is sucked out. When the hole closes, what disappeared is merely on the outside of our bubble, where we can no longer detect it.

I would be glad to elaborate this and my corresponding theories about what the Big Bang was also. I can explain gravity also.

Contact me for more information:

## Chapter 02 - The Bubble

We can see our reflection from the inside of our bubble.

On the other side -- ultimate darkness. Kind of.

This skin of our bubble is the sand of the universe. All the planets, rocks, debris and aliens are molded into this egg shell that separates us from black doom.

This bubble is expanding. Yes it is. it used to be a lot smaller. That's the Big Bang. I'll get to that later.

This bubble is stretching as it enlarges.

This bubble is getting hit by debris from inside, and maybe outside too.

When there is a pop, a poke, a hole in our bubble -- we have a black hole.

Professor Hawking couldn't explain where matter goes that is sucked out. He was close. The outer dimension is like a pit of tar. We are somewhere, below the surface, in this tar pit -- in a bubble.

The bubble may be rising.

This is good and bad.

As the bubble rises in the black tar, the pressure of the tar diminishes on our bubble, so it will expand quicker and less restrained = pop! No more bubble? That's the end of us.

I offer my services as a theorist, psychologist, and philosopher for your discovery programs.

Since the early 1980s I have developed physics theories, and tested my psychological principles on hundreds of students that I teach Tai Chi, Kung Fu, and music lessons.

I have recently contacted Leonard Susskind, Kip Thorne, and Stephen Hawking, to help them complete their Black Hole, and Big Bang Theories. The following information was recently submitted to them:

**To DISCOVERY TELEVISION PRODUCERS: Feb. 27, 2011**

## Chapter 03 - Outside Bubble

I have some neat stories about life outside our bubble universe.

They're probably just my own versions of **Star Trek** episodes. Still, I have seen/imagined life above the tar.

Outside our bubble, in the tar, I saw a collision. I imagined/saw two submarines in the darkness -- collide with each other. This is the blue and the red explosion. Somehow, in some of my dreams, that blue and red made sense... but I don't recall now.

Our bubble could get popped in the propellor of a black tar submarine.

Could there be travel in this black pressure beyond our comprehension? Evidently.

With creatures 2.000 times larger than us, the density-gravity effect is diminished accordingly.

It's been a couple years since I developed these concepts to their current conclusion. I wish I had my notebook-

When I view the information in my mind, now, I tend to believe it was one submarine colliding with some physical matter of the other dimension.

This creates three basic objects in the collision:

1. **The submarine** I'm sure you'll have lots of ideas, suggestions...
2. **The object #2** By putting our universe back together -- we could see what the original pieces were.
3. **Black Tar** This is whatever is outside our bubble.

Number 4 doesn't need to count for this Quantum Physics book. Number 4 element would be the life forces.

More possible elements could have been added by the elements the submarine was composed of and powered by.

## **Chapter 04 - Expanding**

That expanding is not a good thing.

From our Big Bang beginning, we've been expanding like a fart in the swimming pool.

If we are rising, we are expanding exponentially. The black tar density will diminish as we rise in the pond.

The bigger our universe gets, the weaker the bubble gets.

At some point -- we dissolve.

Perhaps we make it to the top of the tar?

What then?

Could we have another beginning?

Probably not.

I'd like to offer hope and a view of the future -- but it's bleak.

I'm not saying party like its the end of the millenium -- but enjoy your life.

That's why I like having a spiritual logic in my life. If you just live as a scientist, all animals are dissectible and people are just statistics. This robotic and practical view of life has no romance in it. Spirituality is a romantic expression. of science. Spirituality is the best of all we can imagine.

## **Chapter 05 - Rising**

That rising thing -- is not a good thing.

But if we make it to the top... our bubble pops... we are flung into the air of this dimension above the black tar...

What then?

Can we breathe?

This basic air may be too pressured for our insect lungs.

What is at the top of the black tar?

I think I'm too influenced by Greek mythology.

Because the outside dimension planet that we may be residing on, within our tar pit, IS SO HUGE -- we will not be able to exist in that gravity. The density of the air would crush us.

Sorry. I really don't have any good news for you. This is just scientific theory about the truth of our existence. We are a piece of dust, named Earth, within a bubble, within a pit of black tar, on a planet so huge that the life forms are a thousand miles tall.

Like the sun burning out, (if our bubble lasts that long), everything dies eventually. Sorry.

## Chapter 06 - Big Bang

That collision. That bang. That Big Bang.

We are the explosion.

The gasses and particles... it could be that this submarine crashed into an under-tar mountain. Buddy Holly of the black dimension. They crash. They are the BLUE, the more refined power source. The mountain is composed of life debris. It burns RED.

Everything expands from the burst.

The debris slammed into the black tar around us and much was absorbed as if dissolved.

But some debris creates a crust on the black tar. This is our bubble.

So some of the explosion particles of subsequent planet collisions... bounce around in our bubble...

The Big Bang was a collision. The concept of there being passengers has added fuel to my creativity. Check out the **History of Zen from A to Z**.

**"Chapter 8 Spiritual Story,"** of this book mentions the alien being theories some more.

However, the unique matter that exists in our bubble had to have a unique original composition. That's why I currently think that most of our matter is rock from the outside universe that some submarine ran into -- with passengers.

That combination of factors -- including the life forces that were mixed into the explosion -- gave us unique potentials.

## **Chapter 07 - Cosmic Burp**

Our existence is dependent upon this burp we live in.

This gas, and space between the planets was created by our explosion.

When the bang loses its power, the outer black tar will push us back and into a smaller bubble.

This may be a good thing.

As I mentioned on another page of this book, this tar outside our bubble has great density. That creates gravity. So everything inside our bubble is being pulled outside towards the tar--in all directions outward from the center of our bubble.

Only in the center of our cosmic burp do we prolong our destiny of becoming stuck like dust on the inside surface of our universal bubble.

## **Chapter 08 - Spiritual Story**

This story is optional. Probably just my imagination. But it's a fun story.

These beings from the tar dimension are thousands of times larger than us.

If you want to be a scientist, you can't "believe" in anything you can't prove or duplicate under repeatable conditions. God and the angels do not cooperate for science -- apparently.

So, if you want to eliminate my fanciful concepts of other dimensions and beings from that dimension trapped within our universal bubble... I understand. I'm a scientist too.

Sometimes, like raising my kids, I transform. I didn't watch my kids play -- I played WITH them. I don't lead my Kung Fu and Tai Chi classes like most instructors -- I DO the Kung Fu and Tai Chi with them -- as much as possible. When I am a scientist -- I think scientifically. When I am spiritual, I sense/imagine/experience the supernatural -- as best I can.

Being spiritual takes a lot of work -- just like anything. Tuning into the radio stations of God is more difficult than tuning into KLOS -- with just your mind -- but I'm working on it.

## **Your Research**

Share some of your knowledge that supports the "**Connor Black Hole Bubble Theory**."

You theories and insights can be posted on the main website page at ***www.RichardDelConnor.com***

It's "Project 17." There is a list of my various theories I'd love to expand on and research further.

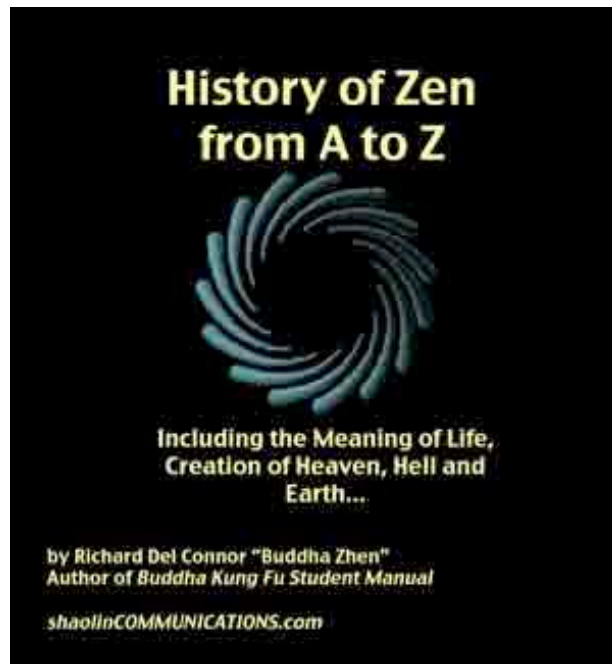

Hopefully I'll be able to befriend some experts, mathematicians, physicists, and creative thinkers by publishing this book, even in its unfinished state.

As I mentioned earlier, most of my life is in storage right now. I dug through my 10' x 30' unit a couple weeks ago--but couldn't find some of my books. That was very disappointing.

### **A Spiritual View of the Universe**

Co-authored by Satan?

God creates Adam and Eve. Satan creates the Garden of Eden.  
This is a funny book. If this is my imagination -- I'm very proud of myself.

If this was really Satan talking -- I must be special.

I'm not sure whether this book is "RELIGION," or "FICTION."

*"What if it's true?"*

## Zen Buddhist Podcast of Shaolin Zen

The **Zen Buddhist Podcast of Shaolin Zen** started in 2007 with Master Zhen sharing his daily experiences as a Mr. Mom, raising two children in Tujunga, California.

In 2010, Buddha Zhen orated the **"Buddhism Basics,"** from [www.shaolinZEN.org](http://www.shaolinZEN.org) These teachings start at the basics of Buddha's birth and move into lifestyle patterns and spiritual athletics.
